What's New in Version 2.2.910?

Version 2.2.910 includes an important update to make QCBD all versions of MS Office running on combinations of any version Windows. This release includes new features, important security updates and reported bug fixes.

1. General – applies to all modules

1	Feature Enhancement: Changes made to ensure compatibility when user is running Office 2010.
2	Feature Enhancement: Added functionality to make use of PDF995 license beyond just Master List. Users with PDF995 license can direct reports to print and save as PDF.
4	Feature Enhancement: Reports - reformatted Pareto Report to landscape layout with enlarged graph and more room for characters.
2	Feature Enhancement: File Attachments - use alternate Windows API for identifying the native application for opening file attachments. Improved compatibility with Windows 7.
3	Feature Enhancement: The Find screen for change history now permits user to create stored queries.
4	Feature Enhancement: At Main Menu, improve error reporting for startup errors caused by loss of network connection or connection to the database.
5	Feature Enhancement: Main Menu Dashboard View - open items message now appears in red.
6	Feature Enhancement: File Attachment grid - widen description column for easier viewing. After an attachment has been highlighted, holding the mouse over the file attachments grid displays a "tool tip" window for easy viewing of file attachment details.
7	Feature Enhancement: Reports - Users can now change the 'confidential' statement that appears in all report footers. See the Reports and PDF tab (previously called the PDF Settings tab) in the Configuration and Preferences screen.
8	Feature Enhancement: The minimum screen resolution requirement has been lowered from 1024x768 to 1000x600 to permit QCBD to run on tablet PC's.
9	Bug Fix: When testing date fields error occurred if date was null (invalid use of null error). Solution: Test for null date fields before testing date values.
10	Bug Fix: When exporting to Excel from the Find window the Excel data is now filtered according to the user's filter criteria.
11	Bug Fix: Filter user's keystrokes to prevent user from selecting multiple records at the same time. Other than Control + C (copy) and Control + V (paste), key combinations that include CONTROL or ALT are not allowed.
12	Bug Fix: Reports - When a user selected multiple sort fields, the report would only sort on the first field. This has now been corrected to allow sorting based upon multiple field selections.
13	Bug Fix: Add time stamp to file checkout to ensure that only one person can check out a file at the same time.
14	Bug Fix: The local Service Pack Update (SPU) did not automatically execute when new versions of QCBD were installed causing the user to have to run the SPU manually at each client machine.

2. Complaints

15	Performance Improvement: Restrict the maximum number of scrollable records displayed on a form to 500.
16	Feature Enhancement: User Defined Text, List and Multi-List boxes are standardized to 2" width and labels standardized to 15 characters.
17	Bug Fix: When creating linked reports, an error caused the report to fail to open properly.
18	Bug Fix: COPY command did not return user to newly created record

3. Corrective and Preventive Actions

19	Performance Improvement: Restrict the maximum number of scrollable records displayed on a form to 500.
20	Feature Enhancement: User Defined Text, List and Multi-List boxes are standardized to 2" width and labels standardized to 15 characters.
21	Bug Fix: When creating linked reports, an error caused the report to fail to open properly.
22	Bug Fix: COPY command did not return user to newly created record

4. Equipment Management

23	Feature Change: Parts Inventory - if inventory option is turned on, minimum reorder quantity and standard order quantity changed from 1 to 0.
24	Feature Enhancement: Field for Life Time Cycle Reading moved from Info Tab to PM tab.
25	Bug Fix: Improve handling of Cycle type frequency. Allow Next Due Date (Date Required) to be manually entered for Cycle UOM.
26	Bug Fix: When calculating next due date (PM or Calibration) allow for leap years when due date is the last day in February.

5. Master List and Change Control

27	Feature Enhancement: Increase columns widths in Find window to display item number up to 30 characters.
28	Feature Enhancement: Allow resizing of multi-select list boxes on the Change Order form.
29	Feature Enhancement: The Item Number field for child items has been made wider to accommodate more characters.
30	Feature Enhancement: In the release email notification the "to" email address is now populated with the email addresses of the CO approvers. This only applies to change orders where no training is required.
31	Bug Fix: Fixed file import for File Attachments. Test for invalid characters in Excel import template file.
32	Bug Fix: When attempting to delete a new master list entry, check for open change orders by looking for entry in Change Items table. (Applies only to items that have never been released).
33	Bug Fix: Clear orphaned document changes when creating new change order.
34	Bug Fix: Email notification for new change orders did not always display the change order number correctly.
35	Bug Fix: When creating a Change Order, the list of open change orders should not accept user input

	(user must select from list of available choices).
36	Bug Fix: Quote marks and apostrophe characters are no longer allowed in the Note fields. These characters interfered with SQL queries.
37	Bug Fix: "Assigned to" date was truncated on printed change order. Field has been widened to accommodate long date formats.
38	Bug Fix: User defined fields on page2 and page3 would not display in Training Database (only).
39	Bug Fix: When viewing file attachments for graphic file types would not display. This has been fixed.
40	Bug Fix: InfoYesNo1 field was incorrectly defaulted to <i>visible</i> and description was "Notify Customer of Change". User could not turn off the field.
41	Bug Fix: When saving a change order, the record jumped to the last available record (should stay on the current record).
42	SQL query error when searching for Change Order (FIND) for users without supervisor rights (site specific searches).
43	Bug Fix: Change Order Design layout would not allow full movement of all controls left / right / up /down.
44	Bug Fix: When assigning a new revision letter or number, the digit zero (0) from number pad was not recognized.
45	Bug Fix: When "Hold for Training", the email notification would show duplicate email address entries.
46	Bug Fix: When using the COPY command, if the 'create change order' event failed, the copy should have been aborted but instead the original document was deleted. This has been fixed.

6. Nonconformance

47	Performance Improvement: Restrict the maximum number of scrollable records displayed on a form to 500.
48	Feature Enhancement: User Defined Text, List and Multi-List boxes are standardized to 2" width and labels standardized to 15 characters.
49	Bug Fix: When creating linked reports, an error caused the report to fail to open properly.
50	Bug Fix: COPY command did not return user to newly created record

7. Process Deviation

51	Feature Enhancement: Added new "Routing Control" option. With Routing Control turned on only System level or Module level supervisors can edit a Deviation if approvers have already been assigned (i.e. deviation is ROUTING).
52	Performance Improvement: Restrict the maximum number of scrollable records displayed on a form to 500.

8. Supplier Management

53	Bug Fix: Quality tab no longer lists voided NCMRs and Voided CARs.
54	Bug Fix: Importing supplier list without supplier management license caused an import error.

55	Bug Fix: When importing supplier list, there was an error evaluating date formats for last and next evaluation due dates.
----	---

9. Training Management

56	Feature Enhancement: Lists for Department, Position and Job Function were limited to 50 entries. Raised list limits to 200.
57	Feature Enhancement: Sort Training Records and Training Gaps according to the user selected criteria on the form.
58	Feature Enhancement: Training Definition and Training Plan tabs - added "Definition/training Name start with" command to improve search capability.
59	Feature Enhancement: added Export To Excel command for Training Matrix, Training Definitions, Training Records and Training Plans.
60	Feature Enhancement: Training Matrix and Configuration - when creating new training definitions, the default for Mandatory is now set to YES (was NO)
61	Feature Enhancement: When recording document related training the document revision is now shown on the screen.
62	Bug Fix: The <i>All Employee Records with Training Overdue</i> menu option in from Main Menu returned incorrect results. This has been fixed.
63	Bug Fix: Permit user to input comments when recording training.
64	Bug Fix: Create clean-up query to clear orphan training records.
65	Bug Fix: Fix date format error for recording Date Given and Signature Date.
66	Bug Fix: Training GAP report records were listed in random order. Now sorted by training name.
67	Bug Fix: Removing a training record occasionally caused QCBD to hang.
